

reino MIX

evolving with your needs

Reino MX, our Pay and Display parking meter, offers the ultimate protection from vandalism and harsh climatic environments. Armoured in stainless steel, and protected further by other security and weather proofing features, the field-proven MX stands the test of time.

The modular design of the MX ensures that maintenance and upgrades are cost-effective and easy to perform. The ergonomic design facilitates good OHS practices. The non-intimidating and attractive design of the MX coupled with the motorist-friendly user interfaces make paying for parking easier, even for the first time user.

Optional wireless technology enables communication with ReinoNet, the industry leading management suite and real-time transaction processing. 'Alternate payment functionality' provides the motorist with choice and convenience, and more means to pay for their parking. ReinoNet gives you visibility of your operation helping to streamline processes.

The design of the MX enables customisation where possible to ensure a flexible solution. The MX is designed to issue tickets in pay parking operations, but the meter can be adapted to issue tickets for other ventures such as boat marinas, golf courses and gyms.

Motorist-friendly user interfaces

The intuitive user interfaces instruct motorists, making payment easy even for the first time user. The MX uses an innovative three-piece decal design with a graphical backlit LCD to guide motorists through the payment process with clear, easy-to-understand instructions.

The display screen messages can be customised to support additional programming or customer requirements. The display is positioned at a comfortable, ergonomic height.

GSM/GPRS modem technology – alternate payments

The optional GSM/GPRS modem technology facilitates credit card and smart card payment as well as allowing the MX to communicate with the industry leading solution, ReinoNet.

'Alternate payment functionality' offers all motorists choice, convenience and additional means to pay for their parking.

The attractive, non-intimidating design of the MX is at home in any environment.

ReinoNet Management System

ReinoNet is a comprehensive suite of management applications, databases and analytical tools that makes intelligent business and operational management easy, and is your ticket to complete operational visibility.

ReinoNet integrates into your operation seamlessly and produces relevant reports to give you complete visibility of your operation in real-time. ReinoNet has been developed around 4 critical areas:

- Asset Management
- Revenue Management
- Performance Management
- Alternate Payment Processing and Reconciliation

In support of environmentally sustainable operations, each MX is fitted with a solar panel. The solar panel is securely sandwiched between a 5mm acrylic lens and a 3mm galvanized steel plate, which separates the panel from the inside of the machine.

Vandal and weather resistant

The MX is extremely resilient to vandalism and harsh environmental conditions. The cabinet is constructed from strong, corrosion-resistant, 316 or 304 stainless steel.

A two-door vault system protects the internal components and cashbox by helping to form the service compartment and the cashbox vault. The MX is sealed and tested for water ingress prior to release from manufacture, ensuring the highest quality.

Electronic components are conformally coated and each MX is fitted with multiple locks as a further security measure. A six point locking system and fully concealed hinges attach the two-door vault system to the cabinet.

6 point locking system

Fully concealed hinges

Easy to service and upgrade

The modular design of the meter's components ensures that maintenance is easy and safe to conduct. Modular upgrades are cost-effective and easy to install. The MX can be programmed remotely or manually at the meter.

The cash is protected by a unique arming mechanism, which locks the cashbox, preventing access to the money in the cashbox on the street. The exchangeable cashbox system facilitates ergonomic retrieval and cash exchange processes.

Service Compartment

Cashbox Vault

Cashbox

'Intelligent cashbox system', patented, prints audit tickets which contain a record of all coin payments made at the meter. An innovative 3-tier coin validation system filters out most introduced liquids and prevents most malicious jams whilst validating the motorist's coins. This flexible system can be programmed to accept new coins.

The MX has self-diagnostic capabilities that, when used in conjunction with ReinoNet Management System, enables the MX to log a job to service technicians, truly streamlining operations and ensuring minimal meter downtime. Two configurable LED indicators illustrate warnings regarding the machine's operational status on street from a distance.

We understand that everyone has different needs.
With Reino MX you choose your solution.

Reino MX 316 Model

The 316 model is leader of its class, armoured in 316 marine grade stainless steel housing, it is the ultimate ticket issuing solution for the toughest environments imaginable.

Reino MX 304 Model

For the discerning operator the 304 model offers value for money. It is highly resistant to vandalism and harsh climatic environments and is available in a range of colours.

The two MX models can be upgraded from the basic model to facilitate alternate payment options and ReinoNet, the industry leading parking management suite.

Technical Data	
Base Meter Components for the 316 and 304 MX Models	
Cabinet	Both models are constructed from precision laser cut, bent and welded steel. 316 Model: 316 marine grade stainless steel 304 Model: Powder coated 304 stainless steel available in a range of colours
Finishing Options	Satin finished stainless steel. Optional powder coat in a choice of colours
Footing	Cast into concrete and further secured through the use of a mounting frame
Processing	Motorola processor
User Interfaces	<ul style="list-style-type: none"> • Backlit graphic LCD • LED Indicators • 4 operational buttons • Innovative three piece decal
Coin Validation Process	3-tier system consisting of an APD, Coin Validator and Coin Entry Chute. An escrow is used to return deposited coins to motorist on cancellation of a ticket
Power	Solar power/Rechargeable battery
Management System	Fully integrated management system, that provides real-time meter and transaction status, and extensive statistical reporting
Height	1600mm (installed)
Width	350mm
Dept	350mm
Weight	85kg
Fixing	4 high tensile anchor bolts cast into concrete footing
Cashbox	8K intelligent cashbox
Operating Range	The MX has been verified to operate in a temperature range of between -10°C and 70°C
Printing	Thermal printer which doesn't require ink or ribbons
Locks	Restricted high security Abloy locks
Communication	GPRS/GSM communication enabled
